INTRODUCTION SQL

SET UP CONNECTION BETWEEN WORKBENCH AND THE SERVER

AJI PRASETYO

HOW TO SET UP CONNECTION BETWEEN WORKBENCH AND THE SERVER?

To set up a connection between MySQL Workbench and a MySQL server, you can follow these steps:

AJI PRASETYO

STEPS

01

Open MySQL Workbench and click on the "New Connection" button in the toolbar.

02

In the "Set Up New Connection" window, enter the connection name, hostname, and port number for your MySQL server. You can also specify a username and password if your server requires one.

04

Click the "OK" button to save the connection and close the window.

03

Click the "Test Connection" button to make sure that MySQL Workbench can connect to your server. If the connection is successful, you will see a message saying "Connection to MySQL Server successful."

Welcome to MySQL Workbench

MySQL Workbench is the official graphical user interface (GUI) tool for MySQL. It allows you to design, create and browse your database schemas, work with database objects and insert data as well as design and run SQL queries to work with stored data. You can also migrate schemas and data from other database vendors to your MySQL database.

MySQL Connections

Local instance MySQL80

 root

 localhost:3306

05

You should now see your new connection in the sidebar on the left side of the MySQL Workbench window. To connect to server, simply click on the connection and then click the "Connect" button.
